WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Positions from the front face of the front end rail, and from the centre line. Weld on a flat table; check diagonals.

Side rails: two 30 x 30 x 1.5 box, 1,200 mm, ends capped.

End rails and crossmembers: five 640 mm lengths between the side rails; crossmember centres at 300, 620 and 950 mm.

Nose bars: 28 x 1.5 tube from the front rail's face, 15 mm in from each side, to the coupler housing's sides, 320 mm from its front end. Fishmouth the ends to sit on the housing.

Arch frames: 25 x 1.5 tube; outriggers at 320 and 920 mm, 117.5 mm out from each side rail; a hoop over each tyre, top 546 mm above the ground; a strut down at 620 mm.

Rivet nuts M6 in the rail tops for the deck (16) and in the crossmember bottoms at 300 and 620 mm, 100 mm each side (enclosure, 4); M5 in the rear rail face (lights, 4).

Tie-down eyes on the side rails at 150 mm from each end.

Dropout plates: see CGM-DWG-104. Paint after welding.

CARGOMULE
